REACH (Registration, Evaluation and Authorization of Chemicals)

In accordance with the European Commission Environment Directorate General and guidelines set forth under **REACH** (Registration, Evaluation, and Authorization of Chemicals), Omega Optical provides this documentation in support of its compliance with all regulatory statutes concerning hazardous substances.

Specifically, the use of Cadmium as governed separately by REACH under the European Union's RoHS requirements (Restriction of Hazardous Substances). As cadmium is deposited at the atomic level, adhered to a substrate and then over-coated to ensure protection from environmental and human exposure, it is deemed to have a negligible health impact.

A handwritten signature in black ink, appearing to read "Robert Johnson Jr.", is written over a horizontal line.

Robert Johnson Jr. D. Sc.  
President, Omega Optical
